Contents Volume 30 (1999)

Special Issue: Selected papers presented at the International Snow Science Workshop held 27 September to 1 October 1998 at Sunriver, Oregon

Preface 1

A new Swiss test-site for avalanche experiments in the Vallée de la Sionne/Valais
W.J. Ammann 3
Wet snow pendular regime: the amount of water in ring-shaped configurations
A. Denoth 13
Snowpack factors associated with strength changes of buried surface hoar layers
B. Jamieson and C.D. Johnston 19
Snow densification during rain
H.P. Marshall, H. Conway and L.A. Rasmussen 35
Review of dry snow slab avalanche release
J. Schweizer 43
Effects of surface warming of a dry snowpack
A. Wilson, J. Schweizer, C.D. Johnston and J.B. Jamieson 59
Evolution of snow slope stability during storms
H. Conway and C. Wilbour 67
Relating storm and weather factors to dry slab avalanche activity at Alta, Utah, and Mammoth Mountain, California, using classification and regression trees
R.E. Davis, K. Elder, D. Howlett and E. Bouzaglou 79
Characterizing the microstructural and micromechanical properties of snow
J.B. Johnson and M. Schneebeli 91
Measuring snow microstructure and hardness using a high resolution penetrometer
M. Schneebeli, C. Pielmeier and J.B. Johnson 101
The stuffblock snow stability test: comparability with the rutschblock, usefulness in different snow climates, and repeatability between observers
K.W. Birkeland and R.F. Johnson 115
FlowCapt: a new acoustic sensor to measure snowdrift and wind velocity for avalanche forecasting
V. Chritin, R. Bolognesi and H. Gubler 125
Simulation of above treeline snowdrift formation using a numerical snow-transport model
E.M. Greene, G.E. Liston and R.A. Pielke Sr. 135
SNOWPACK model calculations for avalanche warning based upon a new network of weather and snow stations
M. Lehning, P. Bartelt, B. Brown, T. Russi, U. Stöckli and M. Zimmerli 145
Hazard mapping for ice and combined snow/ice avalanches — two case studies from the Swiss and Italian Alps
S. Margreth and M. Funk 159
Large-scale measurements of snowdrifts around flat-roofed and single-pitch-roofed buildings
T.K. Thiis and Y. Gjessing 175
